PRODUCT OF GENERAL MOTORS OF CANADA, LIMITED

Alberta's Mineral Production Increasing

Alberta with a mineral production valued at \$32,367,781 contributed 11.84 per cent of the total production in Canada in 1928, according to the recently issued preliminary report of the Dominion Bureau of Statistics. As an indication of the steadily growing importance of Alberta's mining industry, the corresponding figures for the two previous years are: \$20,909,223 in 1927 and \$20,977,027 in 1926. In the value of production Alberta stands fourth among the provinces of the Dominion, being exceeded in this respect by Ontario, British Columbia and Quebec.

The importance of the mineral developments which have taken place in the province is indicated by the following quotation from the report:

"Alberta so far has little to show in the way of metal mining. Coal production made good headway. Natural gas production also reached a new record. Crude petroleum reached a new record output. Bituminous sand deposits were carefully developed during the year, and much progress was made. Cement and other building materials were all produced in quite large quantities, and the total production indicated a very real growth in the mining industry of the province."

The greatest contribution to the year's production was made by the coal mines of the province with an output of 7,356,480 tons valued at \$25,017,068. Oil and gas wells in the province yielded 14,537,115,000 cubic feet of natural gas valued at \$3,301,212 and 488,208 barrels of petroleum worth \$1,787,497. In this connection it is interesting to note that Alberta natural gas made up 63.9 per cent of the Dominion production in volume and 41 per cent in value, and in the case of petroleum the output of Alberta wells represents 79 per cent of the volume and 86.8 per cent of the value of the total Dominion production.

Clay products and brick manufactured in the province during the past year are valued at \$1,498,980, and in this respect Alberta's production stands next to that of Ontario and Quebec. Cement, lime, stone and sand and gravel contribute a further \$2,182,150, while 94 tons of bituminous sands valued at \$374 are included in the year's production. Among the metallic minerals the only ones mentioned in the Alberta report are 68 fine ounces of gold worth \$1,406 and 7 ounces of silver valued at \$4.

Dial's Auction Sales

Sat., April 6—At Oyen. Horses, cattle, farm machinery, household furniture, some buildings and many miscellaneous articles. Sale to commence at 1 o'clock sharp. John Osout, owner.

More Homesteads To be Available in North

Some 6,000 homesteads or approximately 1,000,000 acres in the Grande Prairie district and in the Peace River block in British Columbia will be thrown open for entry in the near future according to word received at Grande Prairie recently from the Department of the Interior Ottawa. This area includes land formerly held as forestry preserves lying between the 54th meridian and the B. C. boundary line and bounded on the north by the south line of Township 81 and on the south by the Wapiti River. An additional area will also be surveyed and thrown open to homesteading. It is expected that entry may be made for some of these lands by about April 15.

Hubert Peck Does Well At High River Horse Sale

At the annual horse sale held at High River during the fore part of last month, the percheron colting, "Tony", owned by Mr. Hubert Peck, brought top price, \$212.50, being \$22.50 higher than any other horse sold. Mr. Peck also sold three Percheron mares, and is well pleased over the results of his first offerings at the High River sale.

"Tony" was purchased for shipment to Nova Scotia, the mares being purchased by local men.

LEGAL NOTICES

NOTICE is hereby given that the business known as "The Noble Cafe" will be taken over on April 1st, 1929, by Wong Ping. All accounts owed by the old firm up to that date, will be settled by Wong Kim, the present proprietor, and should be presented before May 1, 1929.

Wong Ping.
Dated at Oyen, March 29, 1929.

Canada's Future

In a very fine address by Mr. Graham Spry, secretary of the Association of Canadian Clubs, and printed in "The Canadian Nation," the subject which was likewise the heading over the article appearing in this column last week. In fact, last week's article was inspired by Mr. Spry's address. In his speech, Mr. Spry urged that, above all, the two Canadian races should be frank with each other, speak out their feelings freely and courteously, and attack that underlying menace, the fear, the suspicion which engenders broods; and "working for common national ends, working the same national institutions, and developing the same national estate, they will learn to know each other, to recognize each as a Canadian, to feel a sense, not of fear, but of partnership." Then he said:

"One nation, two cultures; one nationality, two races; one loyalty, two tongues; on this the Dominion of Canada is founded, on this the partnership rests by solemn contract, by mutual trust. And thus it must abide or perish. Let it abide, and the nation will grow greater, and the world richer that two races, full of spirit, rich in the heritage that time endows, a tongue, a culture, each their own and shared at times; each shall prosper and flourish, one, secure, secure, partners in the development of the noble estate to which we are fortunate successors. Let it fail, let race seek to dominate race, let prejudice reign its rein and rule rough shod through the fine bonds that unite us and Confederation shall perish, and the peoples of Canada be thrust towards a future, dark and impenetrable."

Looking back over the sixty-odd years of Confederation, can any one imagine what the position of the Dominion would have been had the Canadian people of both races in 1867 not agreed to sink their differences and agree upon compromise policies and enter into a solemn compact with each other, both for the present and the future. Had such agreement not been reached there would have been no Confederation. Had there been no Confederation what would in all likelihood be the position and status of British North America today?

Would it be British? It is extremely doubtful. Long ere this it is highly probable that large sections of what is now Canada would have been merged in the United States. Certain it is that failing Confederation, the isolated Crown colonies would have remained weak, undeveloped. Instead, we have a great and prosperous Dominion, standing on the front as one of the great nations of the world, a tower of strength to the Empire, and already exerting no mean influence in the councils of the nations. The union effected by the solemn guarantees of the act of Confederation was not alone the creation of the Dominion; it was the salvation of the country at large.

Not only must the letter of that contract be lived up to, but the spirit must be observed. Failure on the part of the Canadian people, whether of British or French extraction, to recognize both the letter and the spirit of the union effected by Confederation will be fatal to its existence. And if the union effected by Confederation fails, what are we to put in its place? Confederation is weakened by sniping tactics on the part of one race against the other, and if Confederation is weakened it may perish. On the other hand, cordial acceptance of the spirit of the Dominion pact, which we all laud annually on Dominion Day, will add strength to our sovereignty and a united Canadian people to resist all attacks upon their sovereignty and develop in peace their great heritage.

As Mr. Graham Spry truly states, any other future for Canada but that bound up in full acceptance of terms and spirit of the Confederation pact is indeed dark and impenetrable.

Utilizing Waste Product

Hot Water From Puelco Factories
Cleans Ice From Streets

Hot water as a waste product from ice plants and factories of Puelco, is being used by the city highway department to remove snow and ice from the highways. Street sprinklers and fountains are filled with the hot water and driven to the downtown streets. With one sprinkler following another, both directing streams of hot water onto the pavement, snow and ice melt immediately and are drained away. The hot water, obtained free, saves the city large amounts usually spent shoveling and hauling snow off the streets.

The trouble about mild weather which saves fuel bills lies in the fact that too often the saving has to be paid to the doctor.

Up to well into 19th century, in England, forgery was punishable with death.

Development Of Sheep Industry

Alberta Shipped 10,000 Head To M.C. Last Fall

The sheep industry from a ranching point of view shows signs of development in Western Canada, particularly in British Columbia, says Tom Livestock Branch. Last fall up to values of 10,000 head of ewe stock were bought in Alberta and shipped to the interior points of British Columbia, he pointed out.

Breathes Easy. The construction of the air passages and the struggle for breath too familiar evidence of asthmatic trouble, cannot stand Dr. J. D. Kellogg's Asthma Remedy. This is the famous remedy which is known far and wide for its powerful effectiveness under the very severest conditions. It is to be tried, experimental preparation, but with many years of experience and service behind it. Buy it from your nearest dealer.

Canada's Railways

The list of railways that have disappeared as separate entities includes those that were powerful influences in their day. At the head are, of course, the Grand Trunk and Canadian Northern. They are still well remembered. But how many know that there was once a Great Western Railway that stood on a par with the Grand Trunk before Confederation and for some years afterwards?

Sounds Like Good Advice

Her lips quivered as they approached mine. My whole frame trembled as I looked in her eyes. Her body shook with intensity as our lips met, and I could feel my chest heaving, my chin vibrating, and my body shuddering as I held her to me.

The moral of all this is: Never kiss her in a Ford car with the engine going.

Mindard's Liniment prevents Flu.

Prisoner For Eight Years

Russian Boy Punished By Father For Joining Red Army

A story of an eight-year imprisonment of a boy by his father in a pit near their hut in the village of Savchukov, Kursk province, has been brought to Moscow. In 1918 young Tarasoff joined the Red Army and three years later returned to his native village filled with enthusiasm for the new order. His reactionary father told him "the red army marches against the Czar and you must not serve its ranks." According to the report, that night Tarasoff dug a deep cave in his garden and blinding his one hand and foot threw him into the pit apparently to keep him there until the return of the old order. Recently the father died and the villagers, changing upon the living grave, extricated the worn and wrinkled man who although only 27 years of age had snow white hair. He was said to have been placed in a hospital.

PAINS IN THE BACK

These Are Usually Due To A Weakened Condition Of The Blood

The muscles of the back are connected by a series of strong, but little rest throughout the day. They are therefore in need of all the strength and energy that plenty of pure red blood can give them. If the blood is weak, the muscles will have backache and continue to ache.

Backache seldom or never means kidney trouble. It is nothing more than the result of the weakness of the back showing their exhaustion. The blood is the life of the body. The one generally recognized cause of blood weakness is the lack of pure red blood. I have tried many Pink Pills. When the blood has been improved through the use of Dr. Williams' Pink Pills, the backache has disappeared. Mrs. F. Fairbank, Essex, Ont., tells me that she has tried many Pink Pills. When the blood has been improved through the use of Dr. Williams' Pink Pills, the backache has disappeared.

I suffered for nearly three years with a weak back. At times the pain was so bad that I had to walk half-dragged. I had tried many Pink Pills. When the blood has been improved through the use of Dr. Williams' Pink Pills, the backache has disappeared. I suffered for nearly three years with a weak back. At times the pain was so bad that I had to walk half-dragged. I had tried many Pink Pills. When the blood has been improved through the use of Dr. Williams' Pink Pills, the backache has disappeared.

No Synthesizer. Mr. Morningglad—Where is your magnificent big dog? You don't mean to tell me you've sold him. Mr. Morningglad—No, I sold him. It seemed a shame for me to let to occupy that commodious doghouse this winter when so many people are homeless and in need of a bed and rent for their home to an artist.

The worms that infest children from their birth are of two kinds, those that feed upon the food in the stomach and those that are found in the intestines. The latter are more destructive, as they climb to the walls of the intestines and if not killed they will work havoc. Dr. Williams' Worm Powders dislodge both kinds and while expelling them from the system serve to repair the damaged organs they have caused.

Spurred Up Point Job

Mike was engaged to do a job for Mr. Smith. After a while he came in saying the job was completed and asked for his money. "But, Mike, I wanted two coats of paint on that building," said Mr. Smith. "Begorra, you've got it," said Mike. "I mixed the first coat with the paint for the second and put both coats on at the same time. Speed is my motto."

Short Of Breath

Choking Sensation. Mrs. H. Jay, Dartmouth, N.S., writes: "For over a year I was troubled with smothering spells, shortness of breath, and it was terrible for me to walk, even a short distance, because of the choking sensation. After trying many treatments, in vain, I at last decided to try Mindard's Liniment for Coughs and Colds."

Smothering Feelings

Choking Sensation. Mrs. H. Jay, Dartmouth, N.S., writes: "For over a year I was troubled with smothering spells, shortness of breath, and it was terrible for me to walk, even a short distance, because of the choking sensation. After trying many treatments, in vain, I at last decided to try Mindard's Liniment for Coughs and Colds."

and in a surprisingly short time they are much good. Price 50c per box at all druggists or dealers, or mailed direct on receipt by The T. Milburn Co., Ltd., Toronto, Ont.

I've forgotten I ever had any nerves

Your doctor will tell you how the nerves are affected by the most strained nerves, and how the healthy cleansing action of Wrigley's cigarettes and some very up all round, Alka digestion.

Opportunity For Canadians

Several Positions Are Open On Staff Of League Of Nations At Geneva

Opportunity for young Canadians who wish to live in the beautiful city of Geneva, and to become associated with the work of the League of Nations, is offered by a notice from the Civil Service Commission of Canada, directed to the authorities of the League, which invites applications for one important and two lesser posts. Competitions are open to men and women.

The chief position advertised is that of secretary of the narcotic division of the permanent secretariat of the League. Applicants must speak both French and English, be under forty-five years of age, have had knowledge and experience of administrative and secretarial work, and be trained statisticians. Preference will be given to those having experience or knowledge of the narcotic problem, and any familiarity with the languages of Eastern and Far Eastern countries. The salary attached to this post is about \$4,500 per annum.

A statistician at a salary of approximately \$1,700 a year is also required for the same division who must be bi-lingual and well qualified in statistical statistics. A secretary, shorthand and typist is the third job, which calls for an experienced stenographer with some knowledge of drafting, filing and translation. This post carries the salary of \$1,700 per annum. The last of the three jobs are granted for the two last jobs up to a maximum of \$250 a year.

These interested are requested to send their applications not later than April 1st, to the Secretary of the Appointments Committee of the League of Nations, at Geneva.

It is pointed out by those in charge of the central headquarters of the League of Nations Society in Canada, that quite a number of Canadians have made outstanding reputations in the work of the League, at Geneva, and that positions of those kind are a splendid opportunity to ambitious people from the Dominion as promotion or transfer to more important work, is practically certain, if those getting the appointments show special aptitude in the League's activities.

Cold Killed B.C. Beaver

Many Impressed In Lakes Which Were Frozen To Bottom. Thousands of beaver are believed to have perished in their homes in the lakes and streams of interior British Columbia as a result of the recent protracted cold spell.

Harry Smith, who has trap-lines in the Abertown, Lake and Grizzly Swamp country, reports that many of the little animals are dead in the higher altitudes and he has been told by the observations of a woodsman of many years experience. When all is well in the beaver huts, said Smith, snow soon melts on the tops. Now there are heavy blankets of snow on all the houses along the traplines.

Smith believes that as the water was low in the lakes the entrance to the beaver huts was in shallow water. Heavy frosts came before snow. The result is that many lakes are frozen to the bottom and the beaver imprisoned therein.

To have the children sound and healthy is the first care of a mother. They cannot be healthy if troubled with worms. Use Mother Graves' Worm Exterminator.

The bugs hog horn of a first-class lightship requires an engine of seventy-two horse-power to work it. It can be heard at a distance of twenty miles.

Mindard's Liniment for Coughs and Colds.

Monarchy Divides Germany

Many Incidents Show People Still Cling To Old System Of Rule

Many incidents are constantly happening in Germany to show that the people are still sharply and incurably divided over the question of the monarchy. At Breslau a motion before the city council to remove the statues of three former emperors, including the ex-king, and to rename streets in honor of revolutionary heroes occasioned a bitter fight but was passed by a vote of 40 to 38. At Nimptsch, Silesia, when guests entered a hall on the occasion of a state dinner the portraits on the walls of three former kings were seen to be covered. This precipitated a sharp quarrel and conflict which broke up the party.

Shipping Is Handicapped. On account of an outer and inner bar across the channel connecting Lake Manitoba with the Gulf of Venezuela, only vessels drawing less than 12 feet of water can enter the port, with the result that but two shipping companies, one American and one Dutch, maintain a weekly passenger and freight service between New York and Manitoba.

A Household Medicine.—They that are acquainted with the sterling properties of Dr. Williams' Pink Pills in the treatment of many ailments, would not be without it in the house. It is truly a household medicine, and it is effective in dealing with many ills which the most expensive medicine, so keep it at hand, as the call for it may come most unexpectedly.

Completes With Canada

Forty or fifty years ago, Denmark was a grain producing country. Then the Western Canadian prairie began to export grain cheaper than Denmark could grow it, and so she turned to dairy farming and its natural complement, hog raising. Now the complex with Western Canada in selling bacon to England.

You Can Dye a Dress with Promises!

You can dye a dress—no matter how expensive—without real color. That's the idea behind Diamond Dyes. You can dye a dress—no matter how expensive—without real color. That's the idea behind Diamond Dyes.

Next time you want to dye, try Diamond Dyes. See how easy it is to use them. Then compare results. Note the absence of that red-dyed look of other dyes. Note the brilliant colors. Then observe how they keep their brilliance through wear and washing. If you don't agree Diamond Dyes are the best, your dealer will refund your money.

The white package of Diamond Dyes is the original "all-purpose" dye for any and every kind of material. It will dye silk, wool, rayon, linen, cotton or any mixture of materials. The blue package is a special dye, for silk or wool only. With it you can dye your valuable articles with results equal to the first professional work. When you buy—remember this. The blue package dye silk or wool. The white package will dye every kind of goods, including silk and wool. Your dealer has both packages.

Capture Will Be Painless

New Invention To Be Used On Animals For the Durban Zoo. For the first time in history wild animals are to be captured painlessly for the Durban Zoo.

Authorities of Pretoria Zoo have commissioned Captain Burnett Harris, the inventor of the so-called "mercy bullet," to carry out this task.

This bullet is practically equivalent to a hypodermic needle. The animal who receives it will feel no pain, no more than if it had been brushed by a drug. The bullet itself contains a toxin.

Mindard's Liniment for the Gripes and Flu.

"What rubbish are you reading there, Lucy?" Lucy (aged 10): "It is not rubbish—it is a book on rearing children and I am seeing if you have brought me up correctly."

Expansion Of Manufacturing In Prairie Provinces Expected To Proceed At A Rapid Rate

No sooner does an originally agricultural community tend to become established and develop community centres than an effort begins to build up local industries. This tendency grows as the years pass on even without the additional impetus received when, inside a productive soil, the country is also found to contain valuable minerals. This has been the history of the Prairie provinces, especially in the post-war period, when it has been found that the rich mineral belt of Quebec and Ontario extends westward along the same parallel. Industrialization, therefore, is likely to proceed even more rapidly than heretofore, more especially should the natural resources of these provinces be restored unsolicited.

These provinces, long dependent upon external sources for manufactured products are more than ever set on achieving economic independence and are gradually accomplishing it. The period, indeed is rapidly approaching when the cities of Manitoba, Saskatchewan and Alberta will pride themselves on their industrialization just as do the much older Eastern centres, and conduct as ardent a propaganda for the stimulation of their local enterprises.

Already in Manitoba the output of manufactured goods is approaching the value of its farm products. Last year its industries turned out goods valued at \$129,322,000.

Domestic Government statistics, indeed, indicate that farming is already in second place to industries in that Province now. Revenue from farming in Manitoba in 1927 amounted to \$113,077,000, while the value of manufacturing production in the Province in 1926 was \$122,718,452.

Manitoba, being the largest, established of the three provinces and the tendency of industries being to move westward, the trend is much more pronounced here than in the sister provinces.

According to the Manitoba Industrial Development board, a 21 per cent. increase was recorded last year in the Province's manufacturing output, the greatest growth being in steel, iron and paper products produced in the period since sixty-two new industries were established with several other important locations forthcoming.

The future will see an expansion of manufacturing in the Prairie Provinces at an increasing rate in the consistent effort to reduce the volume of imported necessities. It is not, however, to be anticipated that over the territory as a whole agriculture will ever take second place to manufacturing, but that rather the west will extend along parallel lines, each providing ever larger markets for the other. Industrialization should only increase western Canadian agriculture, particularly by building up a larger domestic consuming population and increasing the need for new farm-ers.

To Hasten Grain Planting

Day and night grain planting may be tried in Germany to avert a possible serious shortage of bread supplies during the coming year. German agricultural leaders, faced with small crops resulting from the February cold wave, are of the opinion that 24-hour planting is the only solution to the difficulty.

Customer: "I want to buy a house."

Real Estate Agent: "Did you have anything special in mind?"

Customer: "Yes, I want one with a parking place for my car, a sparkling place for my daughter, and a parking place for my dog."

A cubic foot of water is convertible into 1.661 cubic feet of steam.

"Well, do you want three penny worth of meat for the cat this year today?"

"No thanks—uncle has gone home again."—Montague, Charlton.

Revised Rules For Hog Grading Adopted

Definite Classification Is Provided For In New Regulations

New hog grading regulations, which have been under consideration by the department of agriculture for a considerable time, have been passed by order-in-council and will become law upon official promulgation. It was announced by Hon. W. R. McCreery, minister of agriculture.

The new regulations provide for definite classification of bacon and non-bacon hogs, involving revision of grades so that hogs heretofore will be graded on nearly as possible in accordance with their actual commercial value.

Packers have undertaken to try to maintain the spread of 50 cents per 100 pounds between "selects" and "bacs" and all other grades have been left to find their own market level in accordance with the principle agreed to at the 1920 session conference in 1927.

The new regulations also provide for the compulsory grading of all hogs at local shipping points in accordance with the official grades.

"During the past year the federal department has had an opportunity to test out the practicability of country grading and are satisfied that it is feasible. Under this new regulation it will now be possible to get the information regarding the grade back to the farmer, as was requested by the producers' representatives at the 1927 session conference held in Ottawa," Mr. McCreery's statement says.

Other changes involve strengthening of the wording of the regulations from a legal standpoint, with a view to eliminating as far as possible the need for litigation in their enforcement.

Expansion Of Motor Traffic In Britain

Ownership Of Cars Is Growing By About 100,000 Annually

The notion that the United States has a monopoly on motor traffic expansion is discredited by a report to the American section of the International Chamber of Commerce from Paris on the growth of motor car ownership in Great Britain.

This, it is said, is mounting by about 100,000 cars annually, rising from 881,000 in 1925, to 787,000 in 1927. "This year's figures," the report continues, "will probably be near to the potential 787,000 suggested by the Society of Motor Manufacturers on the basis of national income statistics. The latter body believes, however, that the inclusion of private cars owned by business firms, and the growing popularity of the 'baby car' of seven or eight horsepower, may raise the potential figure of 800,000 to 1,000,000.

"Within the home market the British manufacturer has secured 82 per cent. of last year's new car sales in Great Britain—and so long as he enjoys the double protection of 33 1/2 per cent. import duty and a taxation system based on horsepower his supremacy does not appear likely to be seriously threatened."

John McCombe, chief medical officer of the Canadian National Railways, announces the appointment of A. O. Beck, as chief organizer of First Aid for the system, with headquarters at Montreal.

A finger-ring made of mistletoe was worn in Sweden as a defense against illness until comparatively recent times.

Three Prairie Provinces Are Anxious To Extend Boundaries Northward To Arctic Circle

Soviets Suppress Religion

New Law Forbids Any Gathering of a Religious Nature

Reports come from Russia about new attempts to suppress religion. A new law has been published, by which it is intended to limit by force even private worship. It forbids every gathering or meeting of a religious nature of women, children or young men. Religious libraries or reading rooms are no longer to be maintained. All objects to be used in religious worship are declared national property, and may only remain in the hands of religious communities in the form of a loan. All public worship in places of assembly, libraries, all meetings in hospitals and prisons are forbidden. In the latter they may only be practiced for those who are seriously ill and who expressly ask for them. These renewed efforts are due to the great increase in religious interest of late amongst the Russian peasants.

Provincial Trade Marks

Indian Symbols Are Suggested To Distinguish Certain Products

The North American Indian was a master of pictorial condensation. Every totum told a story and told it well, and in Western Canada the proposal has been mooted that the preservation of these talented types much could be done in the way of devising trade marks for provincial products.

The marking of goods with some distinctive label has become an important factor in economics and there is more in the suggestion than meets the casual eye. The symbols employed by the red man are unique, yet capable of infinite adaptation, and in time may yet see on commodities a Keweenaw, or the head of a Haida chieftain, informing us at a glance of the country of origin.

Of British Origin

Investigation has disclosed that there is British blood in 87 out of the 95 members of the United States Senate, a fact which may have some influence on the voting when the mooted question for immigration is raised again. Among the United States people as a whole the British strain is only 45 per cent., so it would appear to have a particular affinity for politics.

Health Brings Happiness

It has been said that "a hale collier is better than a sick king." Health is better than wealth, because wealth cannot be enjoyed without health. One's desires and needs cannot be satisfied if the health is poor. Health brings happiness.

30,000 people are killed yearly by fires in India.

New Government Elevator

More than 100 men are employed 50 miles east of Port Arthur taking out piles for the new Government elevator and harbor improvements at Prescott. The contract for this work is the largest of its kind ever given in Canada. More than 2,000,000 feet of lumber is called for in the contract.

DAYTONA BEACH TRAGEDY

In one of the most spectacular and tragic denouements of Daytona Beach racing truck history, Lee Bibb, driver of J. M. White speed-demon car, "Triplets," seeking to surpass the 231 mile world's record, set two days before by Major H. O. D. Segrave, crashed to the sand dunes and death at 202 miles an hour, snuffing out, at the same time, the life of Charles Truax, a news reel cameraman. The accident occurred before 20,000 spectators who lined the mile course and saw Bibb flash by the starting point. The layout here shows: (1) Lee Bibb, 42-year-old Daytona Beach garage mechanic, driver of "Triplets"; J. M. White's racing car, who was killed; (2) and (3) Mr. Segrave congratulating her famous husband, Major H. O. D. Segrave and (4) the huge crowd at Daytona Beach, Florida, who witnessed Segrave's victory and similar to the one that witnessed Bibb's tragic end.

If the Dominion government grants the requests of Alberta and Saskatchewan that the northern boundary of these two provinces be extended to the Arctic, would add approximately seven-tenths to its present area, while Saskatchewan will increase its present area by one and two-fifths of the existing territory.

Alberta covers at present 255,235 square miles of area and Saskatchewan, Premier Brownlee's proposal to extend Alberta's boundaries clear through to the Arctic, would add some 175,000 square miles of new territory to the province.

Saskatchewan's present acreage—land and water—is 251,720 square miles. The northern territory which Premier Gardiner would add to that province is approximately 360,000 square miles in extent.

The requests, if accepted, would make Saskatchewan's area in square miles, 611,720, and Alberta's, 430,235 square miles.

The area of the provinces at present is as follows: Quebec, 703,682 square miles; Ontario, 467,282 square miles; Manitoba, 251,822 square miles; Saskatchewan, 251,720 square miles; Alberta, 255,235 square miles; British Columbia, 355,835 square miles.

Extension of the boundaries of Saskatchewan to include the vast sub-Arctic region lying west of the Hudson Bay and south of the Arctic Ocean would add to the province a territory covering 360,000 and 400,000 square miles, populated by a few hundred Eskimo, Indians, and half-breeds, and a handful of R.C.M.P. officers.

With the extension of boundaries as indicated by Premier Gardiner's request, the Saskatchewan-Saskatchewan government, the province would have an area of about 650,000 square miles, or about 25,000 square miles less than the area of Quebec.

Saskatchewan's bid for an outlet to the sea and extended territory in the north would have a counter-balance from Hon. John Bracken, premier of Manitoba, for more land for Manitoba.

Manitoba has had its boundaries extended three times since the province was known as the "postage stamp province," bounded by a line running north-south from the site of Brandon, and east and west on a line running a little north of Winnipeg.

In 1868 a bill was introduced into the Dominion parliament, and passed without debate, adding 100,000 square miles to the Province of Quebec. In 1912, Acts were passed adding 351,780 square miles to Quebec, 146,000 square miles to Ontario, and 140,000 square miles to Manitoba. A short time before this an Order-in-Council was passed by the Dominion government, granting Ontario a strip of land 250 miles long and five miles wide through the Province of Manitoba to the Nelson River to give Ontario access to Port Nelson.

Is Sparingly Populated

Although Brazil is nearly as large as Europe and larger than the United States, if Alaska is excepted, its estimated population is only about 20,650,000, or a little more than the states of New York, Pennsylvania, Illinois and Colorado. Its four largest states have an average population of only one person to two square miles.

January Building Permits Higher

January's building permits for all Canada have doubled since 1929, having risen from \$4,017,024 in that year to \$8,364,670 in 1929. This is due, in part, to a natural expansion, and also to the fact that building operations are not now halted in mid-winter as they once were.

Early Shopping

There are many things which December and April do not have in common, weather being the first point on which they differ, but there is a piece of good advice which can be accepted without question either in December or April, that is—Do your shopping early.

The buying public has learned from experience that Oyen stores do not emulate the traditional "general store" in buying stocks in the jump for the next five years. Parodying the bromide, "The early bird catches the worm," it can be said truthfully that "The early shopper catches the best of the stocks." If you don't buy early you take what other shoppers have passed up.

Spring and summer buying is limited chiefly to wearing apparel, household needs and the implements out-of-door life. At this time of year, the mind of every man, woman and child turns to thoughts of light colorful raiment, to furnishings which will lend a cool summery atmosphere to the home and to the multitude of accessories to summer play. Our merchants recognize this seasonal demand and provide amply for it, but it is manifest that the wide choice of the new stocks cannot be maintained indefinitely.

Many people defer their spring buying until the passing of winter. Others advance their seasonal buying a few weeks and give themselves the privilege of leisurely shopping and wide choice. The late shopper seldom saves money and loses that enviable satisfaction given only to the early shopper.

Spring stocks are fresh on the counters of your local merchants. First choices are already being made. He or she who hesitates will lose. Shop early for spring as well as for Christmas.

In the good old days fellows used to be taken on tin-types with their best girl. Now they rattle around all over the country in them.

The waitress at a newly opened hotel somewhat startled a guest by inquiring "Will you have your potatoes in their jackets, or in the nood?"

Wife to husband arriving at 2 a.m. "If I only knew where you have been."

Husband: "Honi soit qui mal y pense."
Wife: "There you go. When ever you come home in that condition you start using bad language."

Care of Baby Chicks on Arrival

By Alex. Taylor's Hatchery
Winnipeg, Man.

When your Baby Chicks arrive, be sure to have a comfortable home prepared for them. The lid of the chick box acts as a brooder and should be kept on until you have your brooder ready for them or give them to broody hens. Most farm folk have a brooder house 10x10 feet. This will accommodate 200 to 500 chicks with a coal burning Colony Brooder Stove to mother them. The brooder should be tested and operated several days before chicks arrive and have the Brooder house thoroughly dried before chicks arrive. The temperature of the brooder for the first week should be 95 degrees; second week 90 degrees; third week 85 degrees. The temperature of the brooder house five feet from the floor should be 65 to 70 degrees. Once you have raised chicks with a brooder you will loose all your desire to broody hens. Give Baby Chicks water with the chill removed. Feed all the butter-milk they will drink, have plenty of small chick grit, oyster shell and charcoal in hoppers before them. Feed a Baby Chick Food of 50 per cent fine Oatmeal or a well mixed commercial chick feed. Hopper feeding is a sanitary poultry practice and is especially valuable in preventing disease. Feed chicks what they can consume in 15 or 20 minutes, then remove what is left and feed four or five times a day. Chicks grow when they are consuming the maximum of food and they will only do this when they are hungry between feedings. Feed all the grain in a litter of clover or straw. Green feed should be given at noon. Lettuce or chopped dandelions are very good. A good thing is to give the chicks a warm mash at noon of equal parts of shorts, crushed oats, victory meal and cornmeal, a pinch of salt and pepper to flavor. Also mix with same your clean table scraps.

Cod Liver Oil in the chick mash is essential during cold weather or dull days; it develops bone, muscle, plumage and keeps chicks supplied with the necessary vitamins. For chicks up to one month, use one ounce in ten pounds of dry mash; for older chicks and hens, two ounces in ten pounds of dry mash.

Water dishes or founts should be washed every day. Keep chicks warm and dry, change the litter often, especially if you have a large number together. Protect chicks against colds and draughts.

Agricultural Schools Close

Successful Term

After one of the most successful seasons since their inception the four provincial schools of agriculture closed for the 1928-1929 term during the past week. Premier Brownlee and Hon. R. G. Reid were the principal speakers at the closing exercises at the Vermilion School, Hon. Geo. Haulty spoke at the Old School and Mr. H. A. Craig represented the government at the closing exercises at Claresholm and Raymond. The number of young men and women students in attendance at the schools during the past term has been as follows: Olds 238; Vermilion 175; Claresholm 78; Raymond 61.

Teachers Attend

Annual Convention

Over 1,000 teachers from all sections of the province are meeting in Edmonton during the present week to attend the sessions of the 19th Annual Convention of the Alberta Educational Association. Speakers during the convention will include a number of outstanding authorities on educational affairs.

Here and There

244.
Three fish hatcheries will soon be in operation in Alberta, those at Banff and Waterton Lake being supplemented by one at Edmonton. Each can handle 1,000,000 fry a season. These are not necessarily "fried fish."

A twenty dollar gold piece that was insured for a thousand dollars and that sold for twenty hundred, was recently shipped by Canadian Pacific Express. The coin was one of seven struck by the government in the Cariboo district at the time of the gold rush. It being thought that a mint could be operated on the spot. This proved uncommercial, however, and after seven pieces had been issued, the project was abandoned. The coin in question was shipped by the C.P.S. Montclair to a numismatist in England.

Over 57% of the total investments of the Canadian Pacific Railway and all its varied enterprises are in Canada.

Most fruits, except those indigenous to the tropics, the Canadian Pacific sets up a new record for one day sailing its ships via the St. Lawrence route. There will be 14 arrivals and departures at Montreal and 35 at Quebec, the season opening with the arrival on April 25th of the Montclair and the Duchess of York. The latter will be on her maiden voyage of the St. Lawrence. The first arrival at Quebec will be the Empress of Scotland, May 4th, after a winter of cruising in the Mediterranean.

One little pig went to market; and low and behold there were eight little pigs when the shipment arrived. It was a sow, and on route seven little pigs were the express company should pay the fares of the seven extra and unexpected pigs is a matter that has not been decided yet.

Thirty thousand tons of railway materials—tracks and steel framing for box cars—will shortly leave Vancouver for the Orient, at equipment for the Trans-Siberian Railway. The order for this material was placed thirteen years ago, but delivery was halted with the outbreak of the Russian Revolution, and the equipment held in the Canadian Pacific Railway's yards at Vancouver until conditions for delivery were more favorable.

Vancouver's growth since its incorporation in 1888 is revealed by the official estimate of the population of the new city by the assessment commission which places it at 224,074 for the city proper. A reliable but unofficial estimate of the population of Greater Vancouver is 281,000 exclusive of New Westminster. Greater Vancouver includes the City of North Vancouver and the municipalities of Burnaby and West Vancouver. Greater Vancouver and New Westminster jointly have a population of about 300,000 or about half the population of the entire province.

One of Montreal's first hot buildings that was demolished to make room for one of the latest skyscrapers downtown has appeared on an entirely new site, to the amusement of the citizens. So completely was the building taken down that scarce a score of new stones were required to complete its reconstruction on its new lot.

Up to December 31, 1928 the Canadian Pacific had spent in colonization and Canadian development work, land settlement, etc., nearly \$25,000,000 of its own money.

Mr. Charles Gordon, G.R.E., president of the Bank of Montreal, has been appointed to the board of directors of the Canadian Pacific Railway to fill the vacancy caused by the resignation of Mr. J. K. L. Ross. Senator the Hon. P. L. Beaulieu, also, has been appointed a member of the executive committee of the board.

A shipment of animals that will resemble the cargo of livestock on Noah's Ark will take place shortly from Moose Jaw Wild Animal Park, a number of buffalo, musk deer, elk and other animals will be sent to the Rocky Mountain National Park at Banff, Alberta.

Everyone in Canada is worth \$2,700. That at any rate, is what conditions figures show. The average national wealth for 1928—\$26,591,462,000—working out at that amount per person. Agriculture is the largest single item, and the western provinces come first in the highest per capita wealth of any part of the Dominion.

The Canadian Pacific Railway, in co-operation with the Manitoba Department of Agriculture, Seed Center, Dominion Department of Agriculture and the Manitoba Agricultural College, has provided a seed seed cars and a poultry car, which is travelling through that province. There are demonstrations of grasses, clover and corn, and poultry display, while the accompanying lecturers talk on the importance of seed and farm crops, and lecture on the rearing of chickens, turkeys, etc.

OFFERING 500 SHARES - Non-Treasury Stock

AT \$3.00 IN

WILLOW CREEK HOLDING CO., LTD.

The Company's Officers

PRESIDENT—A. N. WALKER, president and managing director of Alberta Central Distributors, Limited, wholesale coal dealers and mining supplies.
VICE-PRESIDENT AND MANAGING DIRECTOR—Isaac Saunders, president of the Banner Coal Company, Limited, and president of the Stockmen Oil, Ltd., and director of the Calgary Sashery, Ltd.
SECRETARY-TREASURER—J. P. Pearson, general manager of the Alberta Ice Company, Ltd.
DIRECTORS—W. McKinnon, mechanical engineer and former business manager of the Big Valley Collieries; J. C. Ayer, dispatcher for the C.N. Ry.; Dr. McLaughlin, physician and surgeon. The above directors are all Calgary men. Isaac Demian, prosperous farmer on a large scale in the Chinook district, and Wm. Meade, ex-railroad contractor and well-to-do farmer of Chinook.

CAPITAL: 50,000, No Par.
DOMINION CHARTER: ISSUED: 40,000.

PROPERTY: Approximately 14,000 acres proven coal leases in the Willow Creek field, valued at from \$100 to \$300 per acre.

ALL COAL PRODUCED BY COMPANIES HOLDING LEASES UNDER THE WILLOW CREEK HOLDING COMPANY WILL BE MARKED UNDER THE FOLLOWING REGISTERED TRADEMARK:

Company's Policy

Leases to be sublet to development companies and prospects are very good to have from 6 to 8 mines in operation by next fall, on a royalty basis of 25 cts. per ton payable to the Holding Company.

The Company believes that inside of three years there will be a million tons of coal shipped from this field annually. The company has been advised by competent engineers that there are four workable seams, and that the three lower seams have such a low moisture content and are of such hard quality that this coal will successfully compete on the Ontario market, and will stand shipment and necessary storage.

An eminent engineer from Salt Lake City has advised the Company that in his opinion the lowest seam will ship to and compete on the Spokane market. This Company proposes to organize subsidiary companies, for development, each mine being allotted approximately 500 acres. According to engineer's report made by Duncan McDonald, mining engineer, and who was formerly provincial government mine inspector, each unit of 500 acres contains approximately 11,000,000 tons of extractable coal, which will take a mining coal producing 200,000 tons per year, 50 years to mine all the extractable coal. The Company plans a centralized selling agency in the east, working in co-operation with the mining companies. This will open up an exceedingly large market and will ultimately mean that, with the local and eastern markets established, the mining operations will run possibly nine or ten months each year.

The Company now has on hand tentative contracts ready for signature from two firms for 160,000 tons of coal to be delivered this next fall and winter. The 14,000 acres of coal lands through which the Willow Creek Valley runs, make it practical to install the sidetrack accommodation required for approximately 23 mines. Several other companies are mining on adjacent properties, and the conditions found in their mines, together with an examination of the outcroppings found on Willow Creek, make it possible for engineers to report fairly accurately on the available coal reserve and mining condition. The Drumheller Power Co. have already installed their lines on this property.

THIS COMPANY, IT SHOULD BE DISTINCTLY UNDERSTOOD, WILL DO NO ACTUAL MINING OR DEVELOPMENT WORK ITSELF. IT IS ESSENTIALLY A HOLDING COMPANY, AND IS DESTINED TO PROFIT FROM THE SUCCESS OF EVERY PRODUCING COMPANY ON ITS HOLDINGS.

HEAD OFFICE - 106 BURNS BUILDING, CALGARY

See Representative at Alberta Hotel, Oyen

The Cellulose Era

Substance Is Clean and Light and Can Resemble Anything

Virtues of a chemical fabric, both probable and attested, are opened by Dr. Charles H. Herty's report to the American Engineering Foundation on the new age of cellulose and sunlight, into which he sees the world emerging from a long, benighted day justly named for because of its cellulose is a more obvious symbol, perhaps, of the revolution of our times than of their strength. It is clean and light and fluffy and every breeze blows it away; for cotton wool is one kind of it and another is the torn paper that is New York's most plentiful contribution to visiting herons. But cellulose has toughness, too, in its use, for hickory and oak are of its substance and even the humpback's heaviest rope. It is what makes trees stand up straight and leaves spread out their green palms to the sun. And every bit of it is manufactured. Dr. Herty reminds us, out of the cellulose, as free as air. One of them, indeed, is air. The others are sunlight and rain.

The great merit of trees is that they grow themselves. Plowmen need not prepare for them, sowers need not time over them, and the lands at thousands of dollars an acre are not among their demands, hoes and harrows and watering pots have no duties in their plantations. All that the trees ask from man is to be protected from their greatest enemy, which is fire. Over millions of acres of land in the United States, Dr. Herty reports, reasonable fire protection is followed by the sprouting up of forests of tree-fiber cellulose, manufactured gratis by rain and air and sunlight for future generations to use as paper or for all the hundreds of other products into which this universal skeleton of living plants is showing itself convertible.

One difference between an age of cellulose and one of iron or steel is that we never would exhaust our natural resources so long as the sun shone. It is one of the abilities of cellulose, as of *Lion Chaney*, that it can resemble anything. Linen and cotton cloth and paper and rayon are the simplest of its disguises. Motion picture films are made of it. The multicolored lacquers that brighten America's automobiles are another face that it can wear. It has the compressing power of rubber and spun out into tissues thinner than a spider's web. It has been converted successfully into cattle feed and doubtless human food can be made from it if ever there is need.

Mer Less Interchangeable

Specialists In Many Lines Have Replaced General Purpose Man

Men are less interchangeable than they were once. The general purpose man is rare. Specialists, even in the field of labor and industrial work, have taken his place. And specialists cannot be moved around.

Great industrial organization means high production and high wages for its specialists. But failure of that organization for any reason leaves many workers helpless and untrained for the new England unemployment has become a normal condition of disaster, and the nation highly specialized in shipping and industrial production meets with hardship in the post-war readjustment.

The Stirling Point

The Farmer's Advocate says: "When the Government erects a new building the ground beneath is thoroughly investigated, but the Department of Agriculture attempts to build a system of farming without a knowledge of the soils and their requirements. A soil survey is the starting point in all work for the promotion of agriculture."

He—"There is something devilish about you."
She—"You flatterer."
He—"Yes, you're pigeon-toed."

"What was your most difficult victory general?"
"Gettin' my wife past her 36th birthday."—Boris Harnor, Madrid.

W. N. U. 1779

Ornamental Vines For the Home

Number Which Can Be Used To Advantage in West

There are a number of climbing plants that may be used with advantage about the homes in the prairie provinces. No plant that can be set out will more quickly improve the appearance of a bare wall or veranda. A very good native that may be found in the river valley of Alberta, and the western Virginia River (Clematis vitalba), this hardy vine thrives in dry districts and has been used at the Scott, Saskatchewan, Experimental Station, to screen one of the balconies of the Superintendent's residence. It is listed in Circular No. 28, of the Department of Agriculture, at Ottawa. "Flowers for the Prairie Home," that the vines of this plant make dense screens, and they produce wire netting is used for support, the vines will grow from ten to fifteen feet in a season. The flower of the Western Virginia River is white and comes during the midsummer months. These are followed by the seed pods which continue to add beauty to this perennial climber.

The Virginia Creeper, also an excellent vine for the climate of the West, is highly recommended. It is easily started from cuttings.

The River Bank Grape (*Vitis vulpina*) is suggested for some locations, as it is sometimes troubled with the leaf hopper and has to be sprayed with whale oil soap or kerosene emulsion to keep it free.

Among annual climbers recommended in Circular No. 28, are the Common Hop, which makes an excellent screen, and the latter part of the summer, the Cobaea scandens and Canary Bird Vine, all of which grow rapidly from seed and make a delightful effect.

Gave the Show Away

Conjuror Had People Almost Perished by His Woe

A conjuror, giving a performance at a village hall, was the subject of a good story recently told by Mr. Howard Thurston, the well-known English magician and entertainer.

"See, ladies and gentlemen," the conjuror began, "I have here a hat. There's nothing inside it, is there?"

A loud reply of "No!" urged him on.

"Now I am going to get an egg out of this hat," and with a few movements of the hand and several mystic words he produced the egg. Applause made him feel very pleased with himself.

"Now, ladies and gentlemen, I am going to show you the hen that laid this egg."

There was an apparent flutter in the hat, and the fascinated crowd watched and waited for the bird's appearance.

"Up it came, perched itself on the brim of the hat, stretched itself on its toes, pushed its neck in the air, and gave one loud 'Cock-a-doodle-do!'"

Not Responsible

A Jewish gentleman boarded a street car with his small son and handed the conductor a single fare.

"Why, how old is that boy?" asked the conductor.

"Four."

"Well, he certainly looks more than four years old."

"Am I responsible if he worries?"

An average of 100 canaries a day were imported into America in 1928.

Here are shown a few of those picturesque promontories and social figures in mythical Mayfair, the younger set of London's social world.

At Miss Rosemary Hope Here, typical English beauty, who has been placed among the ten most beautiful women of England. (2) Miss

Theresa Jugman, beautiful debutante out of collecting spots in amateur theatricals. (3) Miss Hambro, daughter of Lady Hambro, beauty and athlete. (4) Mrs. Sidney Vanderbilt daughter-in-law of Bill Harry Samuels, is one of the most popular of the younger matrons.

London's Social World

Count Serge Fleury

Count of the Legion of Honor, attaché of the French Ministry of Foreign Affairs, author and lecturer, representing France at the fourth international conference of the National Council of Education to be held at Victoria and Vancouver, early in April. Count Fleury is deeply interested in the soil and air and these will be the topics of his addresses at the conference and also at various cities en route. By his ancestry he is closely attached to the history and literature of France.

Many Nautical Expressions

Large Number of English Words Derived From the Sea

Britishers are essentially a seafaring people, and many common expressions are derived from the sea. The man who told a policeman that he "saw you in the low water," did not mean that his machinery was missing, but that he had lost his way. In an argument, you get at "loggers' heads" with a friend. Many people are "stranded" when they lose their tickets.

If you have been extravagant, you say you are in "low water." You can "raise the tide." Funds are "at a low ebb." "Being above board," "on the rocks," "half seas over," "on a wrong tack." We talk of "sailing under false colors," of "getting under way," "knowing the ropes," "lowering the flag" or "sailing too near the wind," of "looking out for squalls," "going with the tide" and "clearing the decks." Then there are many words of nautical origin that are used in a poetical or metaphorical sense, such as "pilots," "berth," "harbor," "pilot," "lee-way," "A.L." "derelict," and "sheet-anchor."

The Modern Way

Miss Wilcox kept a private school and one morning was interviewing a new pupil. "What does your father do to earn his living?"

"Please, ma'am," was the prompt reply. "He doesn't live with us. Mother takes care of us."

"Well, then, what does your mother do to earn her living?"

"Why," replied the little girl in an artless manner, "she gets paid for staying away from father."

Increasing Canada's Aircraft

The numerical strength of Canada's fighting air craft will be increased to nine planes and six army co-operation machines through delivery within the next few weeks of seven new craft. Five new Sikhs and two Chitties all metal aircraft, now under construction in Great Britain, will be the last word in fighting machines.

The Spacing Of Potatoes

Close Planting Improves Quality and Increases Yield

For the growing of certified seed potatoes there is an advantage in planting the seed fairly closely in the field. An investigation conducted at the Fredericton and Charlottetown laboratories of the Division of Botany, of the Experimental Farms, demonstrated that the close planting not only tends to improve the quality of the seed but increases the total yield. The Dominion Botanist, Mr. H. T. Gussow, in his report for 1927, published by the Department of Agriculture, at Ottawa, for 1927, that the information gained from the field tests gives evidence of unusual possibilities towards producing a greater amount of tubers ranging from 3 to 12 ounces, and so rendering the largest possible amount of tubers from the average crop intended for seed purposes eligible for certification. Mr. Gussow hesitates to make a definite pronouncement on the matter until at least another season's work is carried out. His report, which included tables showing the actual results of different spacings, does recommend spacing the sets from 10 to 12 inches, which distance makes it convenient for roguing the crop, which could not be successfully done when the plants are closer.

Makes Good Living

As Appliance Leader

Man Has Worked Up Unique Business From His Theatre

Professional clapper in a theatre in Berlin for 25 years, is the record of Herr Eckstein, says an article in *The New York Times*.

He entered the "profession" when a theatre manager offered to pay him thirty-three pennies (about 8c.) a day for leading the applause from the stalls. In addition he was given ten to twelve tickets for each performance for distribution among his friends.

So great was the demand for these tickets that Herr Eckstein laid the foundation of a novel form of business, which has so grown that today he, his wife and two others lead the applause from four of the theatres in the German capital.

Berlin theatre managers who wish to make certain of a good "first night" now communicate with Herr Eckstein, and success follows.

Herr Eckstein has an estate in Mecklenburg, bought out of his savings.

Was Great Achievement

Associated Press of America Founded by Melville Stone

To establish a news agency which supplies half the American newspapers with their news of the world, and thus reaches some 60,000,000 readers per day is no inconsiderable achievement. This feat was performed by Mr. Melville Stone, founder of the Associated Press of America, who has died at the age of 81.

Famous as an interviewer, he counted popes, emperors, kings, presidents, prime ministers and famous criminals among his "victims."

The "A. P." as it is called, works in alliance with the several other countries of the same kind in other countries, notably Reuters and the Press Association in England, Havas in France, and Wolff Agency in Germany.

Maid—"The lady can't see you; she is in her bath."

Agent—"Oh, that's all right; I'm selling soap."

Thousand Miles Of Coral

Reef Lies Off Coast Of Queensland, Australia

The Great Barrier Reef of Australia, of which little is known, is to be explored and studied by a scientific expedition which has set out from England. The reef, says *Answers*, is a series of more or less parallel coral-reef reefs that lie from twenty to sixty miles away from the coast of Queensland for a length of 1,250 miles. There must be at least 1,000 cubic miles of coral in them. Its great area is largely uncovered at low tide.

As you approach by boat to its dead mass, you pass over the coral that surrounds it, and looking into a box with a glass bottom thrust under the rippled surface of the sea, you see what have been described as the forms and colors of a tropical forest. There are blocks of the more solid corals and the tree-like forms of the branching varieties, all colored and covered by a living organism, but purple, green and blue, pink and brown.

Here and there as you get close to the solid mass, you can see brilliant blue-orange with black and white bands, iridescent green and blue, scarlet and black, blue and yellow, and of many other colors. The reef is a mass of coral, the branches of the coral growth. Then on the bottom are the two-valved shells known as nautilus, the smaller species nearly buried in the coral and larger ones—sometimes over two feet across—lying on the surface.

The general brown appearance of the reef, and the faint odor of things of the sea give it a very special character. On its rough but not unevenly level surface is broken by temporary lagoons that more or less open up with the falling sea.

Under the edges of the coral, jet-black swirling mounds of coral, and small fish seek hiding places, and the coral reef is a mass of coral.

Altogether the impression is one of a world of things that have been centuries, by an infinite amount of tiny effort, one of the strangest features on the face of the earth.

Poor Return For Kindness

Attorney Who Tried To "High Hat" Benefactor Was Properly Rebuked

Running into Albert Lasker, former chairman of the United States Shipping Board, who has one of the show places of New York, reminded him of what he said to an attorney who tried to "high hat" him. Through his influence this attorney had been set up in office in one of the big law firms in New York, and because he brought in so much business he was made a member of the firm. The day after his name had been placed on the door, Mr. Lasker had occasion to call on him.

"I'll phone about some minor matter," "Drop around at my office and we'll get out to lunch," he said, adding: "I can discuss the business of the law."

"Sorry," replied the attorney, "but now that I am a member of the firm, you will have to come to my office to discuss the matter."

"You're joking," protested Lasker, who could not believe his ears.

"No, it's an office precedent," explained the attorney, adding: "You must remember I am now a member of the firm."

"Well, it will not be necessary for me to call at your office," came back Lasker, adding, "for you are no longer my attorney."—New York Evening World.

Could Go Without Calling

As he strolled round his well-kept garden, the major knew a great content.

Beyond the lawn he came across the aged gardener, a very faithful retainer, who was still busy as any gardener can be busy.

"Oh, Giles," beamed the major, patting the old fellow on the shoulder, "my son has been called to the bar."

The ancient straightened his back carefully before making any comment.

"You don't say, sir," he ventured. "From what I know of you, he needs no callin'!"

Recreation Must Be Enjoyable

If whacking a golf ball over green slopes under the summer sun gives you a sense of well-being and you feel willing to take them on trust. What we call our opinions are usually second-hand; they are the opinions of others. The best and truest of modern existence is not conducive to thinking in fact, a kind of contempt is growing up for the conventionalist.

"No," was the unexpected reply. "You see, we are already insured with one company."

"Pa, what is dignity?"

"Dignity, my boy is what you think you possess until the Boss says: 'This is the meaning of this?'"

"What do you think of the [what?]"

"Their charms intoxicate me I can already see double."—Moultin, Charford.

Birds of Passage

Migratory Instincts Of Certain Species Of Birds

Of Mystery

A snow-white Arctic tern, banded as a Redpoll in Labrador on July 25, 1928, was found dead at Margate, in Natal, on the southeast coast of Africa, 9,500 miles away, on November 15. "How could that tern help to answer the old mystery of the migration routes of the world's greatest travelers?"

In mid-July the Arctic terns appeared in Labrador, in Bathia Land, in Greenland, far up within the Arctic Circle. They nest as far north as there is anything stable on which to lay eggs; one nest found 73 degrees from the North Pole contained a downy chick surrounded by a wall of fresh-fallen snow that had been scooped out of the nest by the mother.

When the midnight sun begins to sink low in August the terns fly south. Ten weeks later they are darting about the shores of the Antarctic continent, 11,000 miles away in direct line, again in a land of mid-night daylight. They are darting over Byrd's frozen camp today, but by then they will be on their way home.

Agents of the United States Biological service have banded hundreds of fledgling terns on the nesting grounds at Turnevik Bay, Labrador, and elsewhere. One of these birds was picked up in the Falkland Islands, on October 1, 1927; no other bird had been found on the far side of Africa.

There are other bird mysteries. Six birds that nest in the Far North cross the equator in mid-winter, while birds that breed in the Far South are content to drift a few miles toward the belt line of the earth; where the chimney swifts go when they disappear on the coast of the Gulf of Mexico in autumn, why sent to nest shelter their darting, scurrying forms.

Altogether the impression is one of a world of things that have been centuries, by an infinite amount of tiny effort, one of the strangest features on the face of the earth.

No living creature can endure the dark middle latitudes of the earth. No living creature can endure the darkness of the Arctic wastes.

In the year, for eight months the Arctic terns never face night. They swim the entire length, and perhaps the entire breadth, of the ocean twice each year and week at each point of their journey. See *Work Herald-Tribune*.

No Incentive To Think

Kind Of Modern Life Calls For Ready-Made Opinions

Nowadays, perhaps the incentive to think is less than it has ever been. We have our opinions ready-made for us. It is troublesome to think things out for ourselves.

"What we call our opinions are usually second-hand; they are the opinions of others. The best and truest of modern existence is not conducive to thinking in fact, a kind of contempt is growing up for the conventionalist."

"No," was the unexpected reply. "You see, we are already insured with one company."

With The Times and
Toronto, Ont.

CHAPTER XVII.—Continued.

"Oh yes," he replied absently.
"You were gone for some time
this morning she stated."

"She was," he answered. "I went up to
bring Connie."

Janet's fine eyebrows lifted slightly,
and she looked at Donald with a
curious interest. "Why didn't she
come?"

"She wasn't home."

Her woman's intuition long ago
had told her that the "wooden
as Donald called Connie—was really
in love with him. As she looked at
him now and noticed his pre-occu-
pled air, a pang of jealousy shot
through her heart like an arrow.
Was it possible that he had begun to
realize that the wild girl of the
woods was not a child, and that a
love for her had been kindled in his
heart? The thought made her feel
faint and she tried to put it from her
mind.

Lunch was finished now and they
were walking back to the lake.
Douglas invited the party to take a
trip around the lake in a motor-boat.

Janet hesitated as Donald turned
away with Wainwright. "Aren't
you coming Mr. McLean?" she called.

Douglas turned and shook his head.
"I may be needed here," he said
briefly.

Janet flushed to the roots of her
dark hair and bit her lip in anger.
She was not used to being thwarted
in her desire.

Donald and Wainwright seated
themselves on a bench under the wil-
low and lighted cigarettes. Donald
was ill at ease. The sound of Con-
nie's tragic sobbing was ringing in
his ears. He could see little fig-
ures writing on the ground in a tem-
pest of grief that had torn at his
heart-strings. He sprang involuntarily
to his feet and began pacing the
ground with quick, nervous strides.
Wainwright glanced up at him in-
terrogatively.

"You seem worried," he volunteered.

"I am," Donald admitted briefly.
Donald was in a writer of indeci-

don. How should he breach this deli-
cate subject? Although poor as he
the provincial churchman, Con-
nie's father had the pride of Lucifer.
There was natural dignity in his
bearing, a certain aloofness in his
manner, that in no way interfered
with his unflinching courtesy, but had
never precluded exchange of im-
timacies. He had resided in this
wilderness for many years, but none
could say that they had any more
knowledge of his affairs at this mo-
ment than on the day of his arrival.

Donald decided to take the plunge.
He was alone on the beach beside
Connie's father and related the scene
he had witnessed that morning—
as of Connie's preening before the mirror
with the magazine page pinned to
the logs; of the struggle with her
hair; of the four sobs, and of the
pitiful sobbing of the heart-broken
child.

Wainwright's face flushed pain-
fully. There was a look of poignant
suffering in his grave eyes. Of all
the races in the world, the English—
especially of the better class—fight
fiercely to hide their feelings.

Wainwright leaned forward, his
throat working convulsively as he
struggled to regain composure.

"I hope you do not consider me
presumptuous," said Donald, a note of
anxiety in his tone.

"I have you do not consider me
presumptuous," said Donald, a note of
anxiety in his tone.

"I have you do not consider me
presumptuous," said Donald, a note of
anxiety in his tone.

"I have you do not consider me

presumptuous," said Donald, a note of
anxiety in his tone.

"I have you do not consider me
presumptuous," said Donald, a note of
anxiety in his tone.

"I have you do not consider me
presumptuous," said Donald, a note of
anxiety in his tone.

"I have you do not consider me
presumptuous," said Donald, a note of
anxiety in his tone.

"I have you do not consider me
presumptuous," said Donald, a note of
anxiety in his tone.

"I have you do not consider me
presumptuous," said Donald, a note of
anxiety in his tone.

THINNESS

Over-thinness is detrimental
to a child's progress in
growth and health.

Scott's Emulsion
of vitamin-rich cod-liver oil
is a body-building food and tonic
which cures nervous thinness and
helps build up a sturdy body.

Scott & Bowne, Toronto, Ont. 25-61

amid hearty hand-clapping and
cheering from his friends. A
swarthy-skinned rider, mounted on
a spirited black cayuse, came prancing
through the crowd. He lifted his hat
and smiled in acknowledgment of the
plaudits of the spectators. This was
Joe Lafonte, the half-breed who had
won first prize at the Lillooet races
for the past two seasons.

The wise ones averred that Paul
John, of the Indian contingent, would
give him a hard race. Paul John's
cayuse was young, but the previous
year he had run the half-breed's
horse a close second. Now he was
being placed on all sides, particularly
by the Indians, who are inveterate
gamblers. Amid an excited babble
of "Good luck!" and "Go it!" the
laughing and shouting, with much
waving of hats, to glance about and
behold in acknowledgment of the
plaudits of the spectators.

Donald, with Andy, Gills and
Wainwright, were leaning over the
edge of the judge's stand watching
the animated scene below.

At this moment there was an agita-
tion in the crowd of the oval
where the crowd opened to admit a
horse and rider that came tearing
down the course. The wings were
beating and the crowd was shouting.

"Look!" Donald shouted excitedly
as he seized Wainwright's arm.
"It's Connie!"

Down the course, riding like a
spirit of the woods, came the girl,
her golden hair blowing about her
face. She was wearing a new dress
and riding as if the wilderness
belonged to her alone.

Pegasus was not used to crowds.
With arched neck and quivering
flanks he reared on his hind legs for
a pole as instant, then leaped forward
like a rabbit. Connie rode on the
back of her adored cayuse, with a
part of the animal, her slender
body moving in gentle undulations
with the movements of the horse.

a pole as instant, then leaped forward
like a rabbit. Connie rode on the
back of her adored cayuse, with a
part of the animal, her slender
body moving in gentle undulations
with the movements of the horse."

"Connie's beautiful outdoor life has
helped to keep her young, and her
mode of dressing enhances the
youthful effect," said her father as
he sat down weary, a far-away look
in his eyes. "Her mother," he went
on softly, a tremor in his voice, "was
just like her; at the age of twenty-
five she looked almost a child."

"How old is Connie?" asked Don-
ald, hoping to relieve Wainwright's
embarrassment.

"Fifteen!" Donald re-echoed, a
bemused look on his face. "Great
Scott! This is a surprise. I thought
of Connie as being not more than
fourteen or fifteen."

"Connie's beautiful outdoor life has

fourteen or fifteen."

Succeeds To Title

Resident of Vancouver, Through
Death Of Cousin, Becomes
Baronet

A second Canadian romance of the
British peerage within recent weeks
has come to light in Vancouver. In
the succession of Eric Windham
Francis Carmichael-Anstruther, to
the baronetcy of Carmichael and
Anstruther.

The Vancouver man, now Sir Eric
Windham Francis Carmichael-An-
struther, bart., has left for the family
seat, Carmichael House, Shankerton,
Lanarkshire, Scotland, to settle mar-
riage in connection with the estate fol-
lowing the death of his cousin, Sir
Windham Frederick Carmichael-An-
struther, bart.

Sir Eric expects to be in the old
country about three months, after
which it is his intention to return
to Vancouver, where he has been em-
ployed as a draftsman for the past
three years.

Sir Eric comes of a very old Scot-
tish family which traces its ancestry
for 700 years. He will be the 11th
baronet. Anstruther came to Can-
ada in 1700, and eighth of Can-
michael, created in England, in 1798.
According to a directory of titled
persons he was also a member of
or hereditary carver of the royal
household in Scotland and one of the
masters of the household.

Recipes For This Week

(By Betty Barclay)

FRUIT FRITTERS

2 oranges.

1 egg.

1/2 teaspoon salt.

1 cup milk.

1/2 cup flour.

1/2 tablespoon cooking oil.

1/2 teaspoon baking powder.

1/2 teaspoon sugar.

Beat egg until light; add milk,
sugar and salt, and oil melted
together. Beat until smooth. Pare
oranges, removing membrane with
peel cut in slices, and sprinkle with
sugar and a few drops lemon juice.
Dip deep fat, hot enough to brown
a piece of bread while counting to
25. Dip orange sections in batter
mixture and fry in deep fat until
puffed and brown. Do not fry too
many at one time. Drain on brown
paper, sprinkle with powdered sugar,
and serve with orange sauce.

APPLE AND ORANGE SALAD

Peel and slice oranges, rejecting
white membrane. Cut wedge-shaped
slices from red apples, using a
paring. Arrange on lettuce-covered
salad plates, using alternate slices of
orange and apple.

GRAPEFRUIT SALAD

Peel oranges and grapefruit and
divide into segments, rejecting all
white skin. Arrange a diet of un-
der segments on a lettuce-covered
salad plate and fill centre with
grapefruit segments.

Reduce the Acid

Sick stomachs, sour stomachs and
indigestion usually mean excess acid.
The stomach nerves are over-stimulated.
Too much acid makes the stomach
achy and intestines sour.
Allacid milk acid instantly. The best
form is Phillip Milk of Magnesia, be-
cause one harmless, tasteless dose
neutralizes many times its volume in
acid. Since its invention, 50 years ago,
it has remained the standard with
physicians everywhere.

Take a spoonful in water and your
unhappy condition will probably end
in five minutes. Then you will always
know how to do. Crude and harmful
methods will never appeal to you. Go
prove this for your own sake. It may
save a great many disagreeable hours.
Be sure to get the genuine Phillip
Milk of Magnesia prescribed by physi-
cians for 50 years in correcting excess
acids. Each bottle contains full direc-
tions—any druggist.

Inventor's Claim Unusual

Wisconsin Chemist Says His Me-
chanical Device Can Be Taught

Claim that he has invented a me-
chanical device which is capable of
"teaching" is made by Dr. H. H.
Baernstein of the University of Wis-
consin physiological chemistry de-
partment, following a challenge in-
sulted about a month ago by C. L. Hix,
professor of psychology at the state
school.

Dr. Baernstein's "thinking" ap-
paratus consists of numerous switches,
wires and an incandescent light.
The mechanism, he said, is so ar-
ranged that the bulb may be lighted
by one of the switches and that any
of the other switches may be
"taught" to light the bulb. The opera-
tion he claims, is analogous to the
presentation of stimuli.

"The machine," Dr. Baernstein de-
clared, "is merely a symbol of men-
talism of the human body."

Externally Or Internally, It Is
Good.—When applied externally by
brisk rubbing, Dr. Thomas' Electric Oil
opens the pores and penetrates the
tissue, touching the seat of the
trouble. Internally, it is equally ef-
fective. Administered internally, it will
still the irritation in the throat
which induces coughing and will re-
lieve affections of the bronchial
and respiratory organs. Try it and
be convinced.

Just a Memento

First Housewife—"I suppose you
carry a memento of some sort in
this pocket of yours?"

Second Housewife—"Yes, it is a lock
of my husband's hair."

"But your husband is still alive?"

"Yes, but his hair is gone."

Has a Reason

The mayor of Minneapolis has
been asked to confiscate and destroy
all the "Gideon Bibles" in the city.
The reason is logical enough—
the Scriptures say a lot about St. Paul
but nothing about Minneapolis.

None of us ever gets anything for
nothing, but that doesn't keep us
from trying.

Minard's Liniment Co., Ltd., Vancouver, B.C.

Automobile Is Real

Benefit To Humanity

Curse Is Man Who Does Not Use It

Wisely

The automobile, in itself, cannot
be a curse to anyone. The curse of
the automobile is that of the human
element, of the man who does not
know how to use wisely an instrument
of real benefit to humanity.

Unfortunately the human element
cannot always be controlled. There
always will be those who use auto-
mobiles for law-breaking purposes
and who drive them so recklessly as
to endanger the lives of other peo-
ple.

All automobile owners and drivers
were imbued with a real sense
of their responsibility to their fellow
men, there would be very few ac-
cidents and there would be no need of
judges or anyone else having to
make remarks derogatory to the
character of the automobile as an
essential part of this country's life.

Holloway's Corn Remover takes
the corn out by the roots. Try it
and prove it.

Small Son: "What are diplomatic
relations, father?"

Wise Parent: "There are no such
people, my boy."

Use Minard's Liniment for the Flu.

In the influenza epidemic of 1918-
19 in India more than twelve mil-
lion of the population perished.

The anti-viral salts of wharves in the
Antarctic caused 10,000 a year.

WINDOLITE The Improved Glass Substitute

MADE IN ENGLAND

COMES WITH A MESSAGE OF HEALTH

THE sun is the all-powerful life producer.
Nature's universal disinfectant and
germ destroyer, as well as stimulant
and tonic.

Medical research has definitely proved
that from the point of view of health
and Hygiene, the most effective among the sun's
rays are the Ultra-Violet rays, which possess
the greatest power of killing and curing
germs of disease and debility.

Science has further established that or-
dinary window glass does not allow the pas-
sage of Ultra-Violet rays, so that by using
glass in the construction of houses, the
health-giving rays. Therefore, the invention
of WINDOLITE has been long-looked for.

Exhaustive experiments have conclusively proved that it is
effective substitute for glass, that it freely
admits the Ultra-Violet rays, and that it uses
has a most beneficial effect on the growth
and development of plants and children and
the health of the human body.

Indeed the discovery of WINDOLITE has
during the last six years completely revolu-
tionized the construction of houses, the
production of food, the raising of stock,
poultry breeding, increasing the egg-laying
power and fertility of chickens, and greatly
improved the health of cattle and is now be-
ing used in domestic and hospital require-
ments.

WINDOLITE stands for 100 per cent. sunlight. It
makes light but strong windows for cattle sheds, dairy
stables, poultry houses, barns, and all buildings. It is
economical, unbreakable, flexible and is easy to cut and
fit. It is now being successfully used for sunrooms,
verandas, schools, factories, homes, hospitals, and
beds, plant coverings and greenhouses. It keeps out cold
and rain, and lets in a new and healthy light. It is
easily and is easy to cut. WINDOLITE is supplied in
square yard of WINDOLITE weighs about 14 lbs. while
a square yard of glass of ordinary thickness weighs
about 125 to 150 lbs. The improved WINDOLITE
is no variable. WINDOLITE is made in England.

Price \$1.50 Per Square Yard, F.O.B., Toronto.

About Town and Country

Don't forget Oyen District Builders Night at Oyen Theatre Friday this week. The picture show, *Emil Jannings* in "The Patriots" commences at 5 p.m., and will be run continuously for two showings, followed by a grand dance.

School closed for the Easter holidays last Thursday and will reopen next Monday.

Mr. James Siskley, who has been spending the winter at the coast, returned to Oyen last Friday.

Mr. H. A. Morrison is leaving to-night for Calgary, to hear her sister take part in the provincial contest, southern Alberta division, which takes place in the city to-morrow evening.

Mr. Charles Sweeney, who has been spending the winter months in Regina, returned to Oyen last Saturday, to make preparations for spring work on his farm.

Mr. George Cordell, who has been spending the last two months at Cheam View, B.C., returned to Oyen last Friday.

At the quarterly meeting of the ladies bridge club, held at the home of Mr. and Mrs. S. A. Miller, last night, Mrs. J. P. Kerr won the ladies first prize, and Mrs. M. G. Whitlock, the ladies second prize. Mr. Charles Wright won the gentlemen's first. Mrs. C. L. Dunford and Dr. J. P. Kerr got the booty prizes.

Mr. and Mrs. Chapin and Maxine, and Mr. and Mrs. W. Walker and Rita, motored to Medicine Hat on Monday. Deep snow, encountered on the Wilson ranch, made going somewhat strenuous, other wise the roads proved fairly good. The party returned to Oyen yesterday.

Mrs. E. H. Church was hostess at a shower held for Miss Edith Balsam, last Wednesday afternoon, when about twenty-five guests were present. The bride elect received many beautiful and useful gifts.

Bishop Bros. Stage Bishop

The Bishop rink, north of Excel, was the scene of considerable activity Easter Monday, when five families competed in a five rink 'spiel'. T. O. Stephenson and Ray Anderson played off in the finals with the former winning.

The rinks were skipped by T. O. Stephenson, Ray Anderson, F. Thayer, F. E. Bishop and C. A. Bishop. The ice was excellent in the morning, but toughened slightly before the 'spiel' was concluded at 6:30 p.m.

Santa Claus must be establishing a stable somewhere in this country as it is reported that a consignment of 300 live Swedish Reindeer was recently shipped to Canada. It was the largest shipment of these animals ever to be made.

The recent announcement that a new Dominion Atlantic Railway hotel is to be built at Kenville has been received with enthusiasm, not only among commercial men, but the general travelling public as well in Nova Scotia. At the same time the Dominion Atlantic Railway is the object of a good deal of favorable comment in the fact it is playing in developing Nova Scotia as a tourist ground and the Annapolis Valley.

A taxidermist must be a skilled sculptor and a student of anatomy, said Mr. L. E. Fay, well known western taxidermist and sportsman who visited Montreal recently.

To give a true and life-like appearance to specimens a full-sized clay model is first constructed. From this a plaster cast is made and a papier-mache model formed in turn from this. The final shell over which the skin of the animal is carefully glued shows every feature and conformation of the animal's body.

A break in the fine weather occurred last Sunday when a young blizzard made its appearance. For a few hours in the morning the storm was quite severe, but the weather cleared as the afternoon progressed, and has since been bright and sunny.

Mrs. T. McLellan, who has been visiting her daughter, Mrs. W. V. Miller, left this morning for Morrieville, Alta., where she will visit her son Mr. Alexander McLellan.

A miscellaneous shower was held at the home of Mrs. A. J. Funnell, April 2, in compliment to Miss Edith Balsam, a bride elect of this month, the guests being members of the Women's Guild and a few immediate friends of the bride-to-be. The many lovely gifts were presented to the bride elect by Miss Bella Lees and Mrs. G. S. Peck.

Mrs. Fred Ruddatz and daughter Etta left yesterday for Calgary, where they will spend a few days.

Mrs. G. Freebury of New Bridgen, came to Oyen last Thursday and is the guest of Mr. and Mrs. H. E. Bradford.

At this season of the year, care should be observed to carefully fire-gun or straw stacks or stubble fields before burning same.

Don't forget John Oszust's sale next Saturday.

Are You Buying More Cattle

—seed, grain or equipment? If so, you may possibly require a loan.
